ENTERPRISE AI PLATFORM

AI ENVOY SPHERE

Build a competitive edge with a digital twin of your company and councils of AI agents

Agent creation.
Company knowledge.
Quality control.

Advanced AI capabilities available through configuration.

AI Envoy Sphere is an environment for building agents and councils of agents powered by AI. You select models, knowledge and tools, test responses and share ready-made solutions with teams.

No-code agents

Configure the model, prompt and skills. A prompt assistant, settings versioning and cloning simplify agent development.

Task-specific knowledge

Choose how data is processed and retrieved. Combine RAG with structured facts. Check citations and sources used.

Multi-agent collaboration

Build councils of specialized agents. Configure task delegation, parallel work and dynamic planning.

Tools and automation

Connect MCP tools and agents via A2A. Extend agent capabilities with workflows in Azure Logic Apps and n8n.

Quality you can assess and improve

Response evaluation	Online evaluators and user ratings highlight areas to improve.
Performance analysis	View agent steps, sources used, tokens and execution time.
Phased rollouts	Test new configurations with a subset of users first.

Sharing under organizational control

Publish agents via the web, Teams and API. Manage roles and permissions. Monitor usage, costs and ROI in your organization's Azure environment.

Free discovery workshop

60–90 minutes: your use case, a platform demo and MVP scope.
